DETAILED ACTION

1. The request filed on 8/24/2007 for Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 09/413,012 is acceptable and a RCE has been established. An action on the RCE follows.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 34-35,37-44,46-50,54 and 64 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 84,95,99,112,122,123 and 125 of copending Application No. 10/054477. They are not patentably distinct from each other because they recite the same subject matters as following: a tissue dissector, comprising: an elongated cannula, a distal tip has a tapered outer walls converging to a blunt end, the distal tip disposes on the distal end of the cannula to dissect tissue, where a dilating element has a cross sectional dimension greater than the cross-sectional dimension of the distal end of the cannula and greater than the cross sectional dimension of the distal tip. As to claims 37, 38, 42, 43, 54 and 64 are not patentably distinct from each other because they are essentially the same as those in the cited copending application No.10/054477.

Art Unit: 3773

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
